By Matthew J. Dunne, AI solutions lead, K&L Gates LLP
What is a data scientist? 31
Data in legal delivery 32
Foundations and governance 36
Value 38
Conclusion 39

Chapter 4: Knowledge management, prompt engineering, and the client-facing future of legal knowledge 41
By Colin S. Levy, general counsel, Malbek
Where the real value lives 41
What generative AI use looks like in legal practice 42
Prompt engineering as a legal skill 44
The KM team as adoption engine 46
Practical examples: Successes and failures 50
The client-facing future 53
Conclusion 56

Chapter 5: The legal operations leader: Designing modern legal service delivery 61
By Katie Moon, head of legal design and operations, and Daniel Solomon, portfolio lead: client collaboration, Lewis Silkin LLP
The rise of legal operations 62
What is the focus of legal operations? 63
Who are legal operations professionals? 64
What type of work do they do? 65
How else is AI impacting this role? 69
How will the role evolve? 72

Chapter 6: AI governance professionals: Managing risk in the AI-enabled law firm 75
By Harry Borovick, general counsel, Luminance, and Amy Merrick, senior legal counsel, Google DeepMind
Why governance roles are emerging now 75
The governance professional as translator 76
A practical risk framework: The "four gates" 77
The privilege question: When AI meets confidentiality 79
Cybersecurity, client assurance, and the new trust question 83
Governance as a competitive advantage 83

Chapter 7: Designing the modern legal workforce: Building multidisciplinary teams for the AI-enabled law firm 89
By Dr Catriona Wolfenden, director of product and innovation, Weightmans LLP
The times, they are a-changin' 89
The capabilities modern teams need 90

Choosing the right operating model 92
The Weightmans approach 95
Culture and incentives: Integrating other specialists into partnership-led environments 96
The shift to organizing teams around "products" 99
Challenges and lessons learned: Making multidisciplinary teams work 102

Chapter 8: From roles to systems: How AI is reshaping legal decision infrastructure 107
By Olga V. Mack, CEO, TermScout
The misdiagnosis 107
Core framework: The Legal Decision Stack 108
Supporting framework: Signal vs document 111
Supporting framework: The Risk-Tiered Action Model 113
Example 1: Contracts as decision systems 115
Example 2: ESI protocols as decision systems 117
Why roles are emerging 119
Implications for leadership 120

Chapter 9: The AI-enabled professional: Skills, culture, and adoption in the modern law firm 123
By Paul Caddy, managing knowledge lawyer, Lewis Silkin LLP
The skills required for AI-enabled roles 124
The cultural and behavioral factors that drive successful AI adoption 134
Challenges of embedding new tools into real workflows 139
How firms approach training and capability development 141
Conclusion 143
