

Table of contents

I. Introduction	7
1. The background	7
2. What do we mean when we talk about hydrogen?	11
3. Challenges and opportunities	14
3.1 Transport	14
3.2 Industrial processes	15
3.3 Heating and cooling	15
4. Hydrogen and net zero	16
II. Stakeholders	17
1. Introduction	17
2. Government and international cooperation	18
3. Government at a national level	21
4. Sector regulator	23

5. Producers	26
5.1 Green hydrogen	26
5.2 Blue hydrogen	27
6. Consumers	27
7. Finance and insurance	29
III. Production	33
1. Types of hydrogen	33
2. Regulation	37
IV. Transportation and storage	39
1. Introduction	39
2. Health and safety issues	41
3. Consents and land rights	43
4. International transportation	44
5. Issues and opportunities	46
V. Applications	49
1. Industrial processes	49
1.1 Introduction	49
1.2 Development of hydrogen industrial clusters	50
1.3 Health and safety (and technical) issues	51
1.4 Consent issues	52
1.5 Contractual structures and revenue considerations	53
2. Heating and cooling	54
2.1 Introduction	54
2.2 Customer-facing issues	55
2.3 Safety and appliance standards	56
2.4 Modification of existing infrastructure	58
2.5 Offtake and price control considerations	58

3. Transport	59
3.1 Introduction	59
3.2 Road transport	60
3.3 Fuelling with hydrogen	63
3.4 National and regional initiatives to promote hydrogen-powered vehicles	65
3.5 Rail transport	66
3.6 Marine transport	66
3.7 Aviation	68
3.8 Legal challenges and opportunities	68
4. Energy system management	72
4.1 Introduction	72
4.2 Traceability of low-carbon hydrogen	77
VI. M&A and financing issues in hydrogen projects	81
1. Introduction	81
2. Key structures	82
3. Key terms and requirements for investment	83
4. Project company-based joint venture approach	83
5. Project financing	85
6. Leasing model of financing	87
7. Opportunities and obstacles for investors and financiers	88
8. The cost barrier	89
9. Getting supply to meet demand	91
VII. Conclusion	97
